see also Regenaplex-TherapieEs There are different methods: the ECT-cancer therapy: Any new knowledge must overcome two Hrden example: the bias of the experts and the persistence of ingrained ways of thinking. "Quote: Max Planck tried for 100 years the science" to offer with huge expenditures of funds stand up to cancer. The results are uerst modest. The contrary, the WHO (World Health Organisation) predicts that in 2020 second Erdenbrger dies of cancer each. Cancer specialists to force desperate people in an inhuman treatment concept cell toxins (chemotherapy) and burns (radiation zerstren) also healthy cells. The immune system is geschdigt onto brush. The side effects of these methods are sufficiently known to the parties concerned. There are ignorance and fear to the people with cancer make lhmen helpless. Geschrt is this fear for fifty alleged by cancer specialists, the insecure and desperate people Diagnosebekanntname in an un-human force after treatment concept. Quite different biological cancer therapy. Here man is in the foreground, not the cancer cell. Newer-taking procedures are hyperthermia cancer therapy, laser, Kltechirurgie and PET (Perkutante electric-tumor therapy) or ECT (Electro Cancer Therapy) called. When one tries to ECT, tumor cells not surgically, but non-invasive means of DC . aufzulsen Stark is simplified by the Tumorbekmpfung electricity folgendermaen: I create a tumor by means of two electrodes to a current so fliet these (cells on the principle of least resistance) rather than by the tumor by normal tissue. It hiking positively charged ions such as H + and Na + to the cathode and negatively charged ions such as Cl-to the anode.Through this depolarization results within the cancer cell Salzsure, which destroys the cell membrane. Is used, the BET-7 therapy facility of the company MR Poduschka. The result of the tumor tissue destroys without affecting surrounding healthy Krperzellen be drawn into. The solchermaen sterile dead tissue (we speak of an aseptic necrosis') If in the following weeks, slowly in healthy tissue and is either on the abgestoen or krpereigenen scavenger cells (phagocytes) metabolized. For some time used not only needle electrodes, but for the treatment of internal organs also flat electrodes, which are placed on knnen belly and Rcken. One of the application is therefore now become the Bekmpfung of prostate cancer. The ECT can to gentle way to help avoid interference with the UNNECESSARY Groe befrchteten complications such as incontinence, impotence, and metastasis.The leads between the electrodes in the galvanic current generated tension to an almost selective destruction of tumor tissue. It makes new Possibility is one way in tumor tissue to gentle zerstren. Conventional cancer therapy: long-term success bad! Research: uerst modest Treatment strategies of conventional medical oncology (surgery, radiation, chemotherapy) are aimed! Only to a removal or reduction of tumor mass. Unfortunately, the statistics of recent years showed that few patients could be cured only completeness, to this way. Less than 6% will be cured by chemotherapy, "The long-term cancer balance sheet reflects the helplessness of the conventional medical oncology again. It must be considered that these statics geschnt. A cancer patient is discharged just before his Exitus from the hospital is not listed in the statistics.One can imagine a correct statistics look like wrde. According to the American National Cancer Institute (NCI) knnen 28% of cancer patients by surgery, 12% by a local radiation therapy and less than 6% by systematic chemotherapy be cured, "more specifically at least survive fnf years. Even worse are the results if there is a recurrence, metastasis or a tumor can not be operating. In this case, helps even the 2% of chemotherapy patients to 5 -year survival time, and just 3% have a Lebensverlngerung of more than two years by the Zystostatika resource. More and more oncologists treat by conventional reason today to go over, chemotherapy in advanced cancers, which cause little discomfort not to use .The massive side effects of chemotherapy are too high a price fr short Lebensverlngerung that can be achieved. The ideal cancer therapy instead of cutting, burning and poisoning (surgery, radiotherapy, chemotherapy) should be sought a total concept. Before surgery should always be used to stabilize the immune system substances that reduce intraoperative metastasis risk. Because of the Refinancing bad results (see statistics) can be used for chemotherapy or radiotherapy should be advised only a few cancers. should be accompanied but again always Biological therapies use come. They range from immunotherapy (mistletoe extract or thymus) about orthomolecular therapy (eg vitamin C infusions), enzyme therapy, hyperthermia, ECT and a special National Employment, to to psycho-therapeutic care.The success of conventional medical cancer therapy cancer patients today who are sprlich rt his, his life so weiterzuffren as before the detection of the disease, which is roughly fahrllssig. Each disease has multiple causes, which shall bring it. We are at a turning point. If the path started yet conventional way pursued, it is not too far future of cancer is the No. 1 cause of death be. Although

years for Yearbook the so-called research were invested in billions, the result is depressing. The success of conventional medical cancer therapy speaks.

Die in diesem Verzeichnis vorgestellten Therapien und Methoden werden zum Teil seit Jahrhunderten praktiziert und sind auch in heutiger Zeit in Kursen und Seminaren unterrichtet worden. Sie können bei gesundheitlichen Problemen Rat und Hilfe eines Arztes nicht ersetzen. Der Betreiber dieses Verzeichnisses übernimmt keine Haftung für Schäden, die sich aus dem Gebrauch oder etwaigem Missbrauch der hier vorgestellten Therapien und Methoden ergeben.
