

Astrology

Autor/in:

What is astrology? Astrology is the systematic basis in anthropological-mythological interpretation of the position of certain celestial bodies (especially of the planets of the solar system).

It seeks, among other things, derive from the context of birth, birth date and place of the heavenly bodies, according to astrological school system's character and / or the fate of a man. The views of astrology are also deeply divided among astrologers. They range from the claim to be able to make forecasts of future events objectively verifiable, up to a pure of character, explaining astrology, which vehemently rejects the prognosis.

Astrology in the World Cultures In all the world's cultures can be seen that astronomical phenomena have always exercised a compelling effect on people.

The approach to astrology is topocentric (site specific) orientation, because the elements of the chart refer to the earthly time and place. The fact that the show in the sky visible elements equivalent to each observer, the astrology is based on an apparent objectivity. This is the natural scientists, has repeatedly called out for criticism. Since in the derivation of the modern astrology astrological statements only on a symbolic level, which is inconsistent with the known physical principles that recognize the physical and natural astrology, the scientific method is not as relevant to them for.
